

Senior Software Engineer

Enterprise Platforms | Configuration Delivery | Reliability

TARGET ROLE

Software Engineer Senior - Life ALIP | USAA | Job R0118533 | Plano, Texas

PROFESSIONAL SUMMARY

Former USAA Software Engineer III with more than 10 years of experience designing, delivering, and operating business-critical software across the complete development lifecycle. Translate complex business requirements into configurable workflows, services, integrations, data models, and production releases. Experienced in technical leadership, cross-functional delivery, design and code quality, production troubleshooting, secure cloud engineering, CI/CD, observability, and mentoring. Hands-on background spanning Java, JavaScript/TypeScript, SQL, Python, Go, AWS, Kubernetes, PostgreSQL, Redis, and enterprise delivery tooling.

CORE QUALIFICATIONS

Platform Delivery	Configurable systems, business rules, workflows, APIs, data models, system integrations, full SDLC
Languages and Data Cloud and CI/CD Reliability and Security	Java, JavaScript, TypeScript, SQL, Python, Go, PostgreSQL, Redis, RabbitMQ, Kafka AWS, Kubernetes, Docker, Terraform, GitLab CI/CD, GitHub Actions, Jenkins, Helm Production support, root-cause analysis, incident response, monitoring, performance, IAM, OAuth 2.0, SSO
Technical Leadership	Architecture, design reviews, code quality, mentoring, stakeholder alignment, cross-functional coordination

PROFESSIONAL EXPERIENCE

Senior Software Engineer BAAS Software Remote	June 2022 - Present
- Own configurable web, mobile, backend, and platform products from idea validation and requirements through architecture, implementation, testing, production release, monitoring, and continuous improvement. - Translate ambiguous business needs into delivery roadmaps, business workflows, data models, APIs, system boundaries, and implementation plans while aligning engineering, product, operations, and customers. - Design and build integration-focused services and applications using JavaScript/TypeScript, Go, PostgreSQL, Redis, REST APIs, event-driven patterns, and containerized infrastructure. - Establish engineering standards and repeatable review practices for architecture, implementation, testing, security, release readiness, and long-term maintainability. - Build CI/CD pipelines and release workflows for cloud, containerized, serverless, web, and mobile targets across AWS, Cloudflare, Docker-based platforms, and application stores. - Direct production troubleshooting across user interfaces, services, data, integrations, and infrastructure; maintain 99.9% uptime while reducing release time by 40%. - Implement least-privilege AWS IAM, OAuth 2.0, SSO, 2FA, monitoring, logging, dashboards, and alerting; supported a 100% security-audit compliance rate.	

Software Engineer III USAA | Remote

June 2020 - July 2022

- Strengthened enterprise software delivery, reliability, quality engineering, and operational readiness for systems serving USAA members and internal teams.
- Automated deployment pipelines and repeatable development workflows, improving release consistency, service stability, and recovery from change-related failures.
- Partnered across engineering, security, and operations to investigate end-to-end application and system behavior, remediate vulnerabilities, reduce operational risk, and prevent recurring failures.
- Implemented real-time monitoring and alerting, supported complex production incidents, led post-incident reviews, and converted findings into durable reliability improvements.
- Served as Vice President of the Quality Engineering Society, advancing automated, integration, regression, and performance-testing practices across engineering teams.
- Guided engineers in SRE, testing, troubleshooting, and quality practices while communicating technical risks and solutions to cross-functional stakeholders.

Software Engineer Web Plant Media | Remote

July 2018 - May 2020

- Built reusable React component libraries, configurable content systems, custom WordPress themes, APIs, and responsive application experiences.
- Translated business requirements and user workflows into maintainable technical solutions, coordinating design, development, client review, launch, and ongoing support.
- Migrated client platforms to AWS and introduced monitoring, alerting, logging, backup, and disaster-recovery practices that improved availability and issue resolution.

Software Engineer Caprock Custom Apps

February 2017 - July 2018

- Delivered custom web and mobile applications across front-end interfaces, Node.js and Express services, APIs, integrations, and data workflows.
- Worked with clients and cross-functional teams to define requirements, evaluate constraints, shape scope, and carry products through testing, deployment, documentation, launch, and support.
- Optimized service architecture and request handling, reducing response times by up to 30% for key application features.

IT Support Technician / Supervisor Texas Tech University - IT Help Central

November 2015 - August 2017

- Diagnosed complex software, account, network, hardware, and endpoint issues; investigated root causes and coordinated resolution with specialized technology teams.
- Promoted to Lead Technician, coordinated daily support operations, led technical projects, and created knowledge resources used by thousands of university users and technicians.

EDUCATION AND LEADERSHIP

Bachelor of Business Administration

Fall 2015 - Spring 2020

Texas Tech University Information Technology - Emphasis in Application Development

Vice President, Quality Engineering Society

November 2020 - July 2022

USAA Engineering quality, testing practices, mentorship, and operational excellence
