

Thomas Miller

Senior Software Engineer

Platform Engineering | DevOps | Site Reliability | Secure Systems

wthomasmiii@gmail.com | (972) 795-9884 | thomasmiller.cv

PROFESSIONAL SUMMARY

Platform-focused engineer with more than 10 years of experience building full-stack products and the systems that keep them reliable: cloud infrastructure, CI/CD, observability, identity and access management, scalable architecture, incident response, and technical leadership.

CORE EXPERTISE

Languages: HTML, CSS, Sass, Less, JavaScript, TypeScript, Java, Go, Python, C#

Web Development: React, Next.js, Tailwind CSS, Bootstrap, Context API, Redux, Zustand, Jest, Vite, Selenium, Storybook

API Development: Node.js, Express, Fiber, Gin, Django, Spring Boot, GraphQL, Headless CMS

App Development: Flutter, Ionic, .NET, React Native, Three.js, Unity, Unreal Engine

Infrastructure: AWS, Docker, Docker Swarm, Kubernetes, Serverless, Terraform, Layer 4 and 7 Networking, HAProxy, NGINX, Load Balancing

Security, Authentication, and Authorization: IAM, JWT, Session Management, Cookies, CORS, CSRF, RBAC, PBAC, Keycloak, Okta, Active Directory, LDAP

DevOps: CI/CD, GitOps, Git, GitHub, GitLab, ECR, Artifactory, Docker Hub, GitHub Actions, GitLab CI/CD, Jenkins, CircleCI, Fleet, Helm, Prometheus, Grafana, ELK, Datadog, Splunk

Site Reliability Engineering: High Availability, Latency Optimization, Auto Scaling, Monitoring, Incident Response, Post-Incident Review

Testing: Unit Testing, Integration Testing, End-to-End Testing, Performance Testing, Security Testing

Data and Databases: Data Modeling, Normalization, ER Diagrams, Data Integrity, PostgreSQL, MySQL, MongoDB, DynamoDB, Cassandra, Redis, RabbitMQ, Kafka

Software Architecture: Monoliths, Microservices, Domain-Driven Design, Test-Driven Development, Event-Driven Architecture, System Design

Technical Documentation: API Documentation, Code Documentation, Architecture, Requirements, System Design, Deployment, User Manuals, Swagger, Postman, UML, Lucidchart, Docusaurus

Project Management: Agile, Scrum, Cross-Functional Collaboration, Mentoring

SELECTED PORTFOLIO

EazyHQ

Active development

Lead Software Engineer | June 2026 A modular workspace operating system for projects, data, automation, content, and team workflows. **Technologies:** Flutter, Dart, Go, PostgreSQL, Redis, Docker, GitHub Actions, Caddy

- Designed a registry-first add-on architecture with build-time linking and workspace-level enablement.
- Built event-driven automation infrastructure covering subscriptions, queued steps, waits, execution logs, and run histories.
- Developed workspace dashboards with configurable tabs, permission-aware editing, and add-on-provided widgets.
- Implemented platform capabilities for forms, structured data, APIs, sites, email, calendars, storage, reports, directories, and wikis.
- Created a cross-platform Flutter interface backed by a Go service layer, PostgreSQL, Redis, and containerized deployment.
- Established GitHub Actions and Docker-based delivery workflows for the API and web application.

Listings+

Portfolio snapshot

Full-Stack Software Engineer | 2025 An AI-assisted real-estate discovery experience that turns natural-language preferences into focused property results. **Technologies:** Next.js, React, TypeScript, Tailwind CSS, Cloudflare, Radix UI

- Created a natural-language property search flow with city autocomplete and structured preference capture.
- Developed responsive listing cards, comparison tables, image carousels, and property-detail experiences.

- Built server-action boundaries for search and lead-submission integrations.
- Composed accessible, reusable interface primitives with Radix UI, Tailwind CSS, and motion libraries.
- Prepared the Next.js application for Cloudflare deployment with OpenNext.

PDF Generator Service

Portfolio snapshot

Backend Software Engineer | 2024 A TypeScript service that renders structured content into polished PDFs and publishes them to S3-compatible storage. **Technologies:** TypeScript, Express, Puppeteer, AWS SDK, Docker

- Designed a small Express API for document-generation requests.
- Implemented reusable cover and content-page layouts for structured project data.
- Integrated Puppeteer and Chromium for predictable server-side PDF rendering.
- Added S3-compatible object storage and public file URL responses.
- Containerized the service for repeatable builds and deployment.
- Added temporary-file cleanup and environment-driven configuration.

PROFESSIONAL EXPERIENCE

BAAS Software

June 2022 - Present

Senior Software Engineer

Remote

- **End-to-end product ownership:** Lead products from initial idea and concept validation through requirements, planning, architecture, implementation, testing, production launch, monitoring, support, and continuous improvement.
- **Full-stack product delivery:** Design and build customer-facing web applications, mobile applications, backend services, APIs, data models, automation systems, and internal platforms across the complete software development lifecycle.
- **Web and mobile releases:** Prepare and release production web and mobile applications, manage versioning and app-store submissions, issue updates, support users, and operate products after launch.
- **CI/CD and deployment engineering:** Build GitHub Actions pipelines and repeatable release workflows for cloud, containerized, serverless, static, web, and mobile targets across AWS, Cloudflare, Docker-based platforms, and application stores.
- **Production reliability:** Improve deployment pipelines, operational readiness, and site reliability, helping maintain 99.9% uptime while reducing release time by 40%.
- **Observability and incident response:** Implement monitoring, logging, dashboards, alerting, and production diagnostics with Prometheus, Grafana, and Kibana; investigate incidents and carry corrective work through deployment.
- **Cloud architecture and operations:** Design, deploy, and maintain AWS infrastructure, improving application performance and release efficiency while controlling infrastructure costs.
- **Security and identity:** Create least-privilege AWS IAM policies, remediate unauthorized-access risks, and support a 100% security-audit compliance rate; deliver OAuth 2.0, SSO, 2FA, magic links, temporary codes, and secure session workflows.
- **Technical leadership:** Translate ambiguous business ideas into executable roadmaps, architecture decisions, delivery plans, and production systems while coordinating stakeholders across engineering, product, operations, and customers.

USAA

June 2020 - July 2022

Software Engineer III

Remote

- **Quality engineering leadership:** Served as Vice President of the Quality Engineering Society and advanced automated, integration, regression, and performance-testing practices across engineering teams.
- **DevOps enablement:** Automated deployment pipelines and repeatable development workflows, improving release consistency, service stability, and recovery from change-related failures.
- **Site reliability engineering:** Partnered across engineering, security, and operations to analyze performance, remediate vulnerabilities, reduce operational risk, and prevent recurring failures.
- **Monitoring and incident response:** Implemented real-time monitoring and alerting, supported production incidents, led post-incident reviews, and converted findings into durable reliability improvements.
- **Scalable systems:** Contributed to resilient application and service designs aligned with availability, capacity, performance, and maintainability requirements.
- **Mentorship and standards:** Guided engineers in SRE, testing, troubleshooting, and quality practices while helping teams adopt stronger engineering standards.

Web Plant Media

July 2018 - May 2020

Software Engineer

Remote

- **Cloud migration:** Planned and executed client website migrations to AWS, improving performance, availability, security, scalability, and hosting efficiency.
- **Observability:** Introduced application monitoring, alerting, and actionable logging to accelerate issue detection, troubleshooting, and performance analysis.
- **Business continuity:** Developed and tested backup and disaster-recovery procedures that reduced operational risk and supported faster service restoration.
- **Web performance:** Improved page speed, search visibility, accessibility, and data protection across a portfolio of client websites.
- **Client delivery:** Translated business requirements into practical technical solutions, managed expectations, and supported client systems through launch and ongoing maintenance.

Software Engineer

- **Product discovery:** Worked directly with clients and cross-functional teams to define requirements, evaluate constraints, shape product scope, and prepare solution plans tied to business outcomes.
- **Full-stack delivery:** Built custom web and mobile applications across front-end interfaces, Node.js and Express services, APIs, integrations, and data workflows.
- **Backend performance:** Optimized service architecture and request handling, reducing response times by up to 30% for key application features.
- **Software lifecycle:** Carried products from discovery and planning through development, testing, deployment, documentation, launch, and post-production support.
- **Mobile releases:** Prepared and released multiple applications through mobile app stores, managed updates, and resolved post-launch technical issues.
- **Maintainable architecture:** Introduced reusable patterns and scalable codebase practices that reduced technical debt and shortened debugging time.

IT Help Central

November 2015 - August 2017

IT Support Technician / Supervisor

- **Technical support:** Diagnosed and resolved software, hardware, account, network, and endpoint issues for students, faculty, and staff through walk-up, phone, and on-site support.
- **Knowledge management:** Created and maintained searchable troubleshooting documentation used by thousands of Texas Tech University users and support technicians.
- **Team leadership:** Earned promotion to Lead Technician, coordinated day-to-day support work, assumed additional operational responsibilities, and led technical projects.
- **Incident ownership:** Triaged requests, investigated root causes, escalated effectively, and collaborated with specialized IT teams through resolution.
- **Customer communication:** Explained technical issues and solutions clearly to people with varied experience while maintaining a service-focused support experience.

EDUCATION

Bachelor of Business Administration (BBA), Information Technology — Emphasis in Application Development

Fall 2015 - Spring 2020

Texas Tech University Completed a business and technology curriculum focused on application development, information systems, and practical software delivery.

LEADERSHIP

Vice President, Quality Engineering Society, USAA

November 2020 - July 2022

Elected to help advance quality engineering practices, testing frameworks, mentorship, and operational excellence.
